Population

1990 Population	1,170,413
2000 Population	1,545,387
2010 Population	2,173,606
2015 Population	2,374,034
1990-2000 Annual Rate	2.82%
2000-2010 Annual Rate	3.38%
2010-2015 Annual Rate	1.78%

In the identified market area, the current year population is 2,173,606. In 2000, the Census count in the market area was 1,545,387. The rate of change since 2000 was 3.38 percent annually. The five-year projection for the population in the market area is 2,374,034, representing a change of 1.78 percent annually from 2010 to 2015. Currently, the population is 49.6 percent male and 50.4 percent female.

Households

1990 Households	402,067
2000 Households	506,218
2010 Households	693,993
2015 Households	754,212
1990-2000 Annual Rate	2.33%
2000-2010 Annual Rate	3.13%
2010-2015 Annual Rate	1.68%

The household count in this market area has changed from 506,218 in 2000 to 693,993 in the current year, a change of 3.13 percent annually. The five-year projection of households is 754,212, a change of 1.68 percent annually from the current year total. Average household size is currently 3.08, compared to 2.98 in the year 2000. The number of families in the current year is 510,064 in the market area.

Housing

Currently, 58.4 percent of the 806,956 housing units in the market area are owner occupied; 27.6 percent, renter occupied; and 14.0 percent are vacant. In 2000, there were 584,674 housing units - 59.6 percent owner occupied, 27.0 percent renter occupied and 13.4 percent vacant. The rate of change in housing units since 2000 is 3.19 percent. Median home value in the market area is \$191,710, compared to a median home value of \$157,913 for the U.S. In five years, median home value is projected to change by 3.69 percent annually to \$229,748. From 2000 to the current year, median home value changed by 3.48 percent annually.

Average Household Income

1990 Average Household Income	\$41,493
2000 Average Household Income	\$56,000
2010 Average HH Income	\$67,972
2015 Average HH Income	\$77,679
1990-2000 Annual Rate	3.04%
2000-2010 Annual Rate	1.91%
2010-2015 Annual Rate	2.71%

Households by Income

Current median household income is \$54,762 in the market area, compared to \$54,442 for all U.S. households. Median household income is projected to be \$62,428 in five years. In 2000, median household income was \$43,082, compared to \$33,081 in 1990.

Current average household income is \$67,972 in this market area, compared to \$70,173 for all U.S. households. Average household income is projected to be \$77,679 in five years. In 2000, average household income was \$56,000, compared to \$41,493 in 1990.

Current per capita income is \$22,040 in the market area, compared to the U.S. per capita income of \$26,739. The per capita income is projected to be \$25,030 in five years. In 2000, the per capita income was \$18,689, compared to \$14,510 in 1990.

Population by Employment

Currently, 82.5 percent of the civilian labor force in the identified market area is employed and 17.5 percent are unemployed. In comparison, 89.2 percent of the U.S. civilian labor force is employed, and 10.8 percent are unemployed. In five years the rate of employment in the market area will be 85.3 percent of the civilian labor force, and unemployment will be 14.7 percent. The percentage of the U.S. civilian labor force that will be employed in five years is 91.2 percent, and 8.8 percent will be unemployed. In 2000, 58.2 percent of the population aged 16 years or older in the market area participated in the labor force, and 0.2 percent were in the Armed Forces.

In the current year, the occupational distribution of the employed population is:

- 56.7 percent in white collar jobs (compared to 61.6 percent of U.S. employment)
- 20.1 percent in service jobs (compared to 17.3 percent of U.S. employment)
- 23.2 percent in blue collar jobs (compared to 21.1 percent of U.S. employment)

In 2000, 73.4 percent of the market area population drove alone to work, and 3.9 percent worked at home. The average travel time to work in 2000 was 31.2 minutes in the market area, compared to the U.S. average of 25.5 minutes.

Population by Education

In 2010, the educational attainment of the population aged 25 years or older in the market area was distributed as follows:

- 20.5 percent had not earned a high school diploma (14.8 percent in the U.S.)
- 28.3 percent were high school graduates only (29.6 percent in the U.S.)
- 7.5 percent had completed an Associate degree (7.7 percent in the U.S.)
- 13.4 percent had a Bachelor's degree (17.7 percent in the U.S.)
- 6.8 percent had earned a Master's/Professional/Doctorate Degree (10.4 percent in the U.S.)

Data Note: N/A means not available.

2005-2009 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2005-2009 ACS estimates, five-year period data collected monthly from January 1, 2005 through December 31, 2009. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow—use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.

Average Household Income for HHr 65+	\$59,196		\$1,724	

Data Note: N/A means not available. Population by Ratio of Income to Poverty Level represents persons for whom poverty status is determined. Household income represents income in 2009, adjusted for inflation.

2005-2009 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2005-2009 ACS estimates, five-year period data collected monthly from January 1, 2005 through December 31, 2009. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow—use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.
